                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DOMAIN: THE RODLIKE TAIL SEQUENCE IS HIGHLY REPETITIVE, SHOWING CYCLES OF A 28-RESIDUE REPEAT PATTERN COMPOSED OF 4 HEPTAPEPTIDES, CHARACTERISTIC FOR ALHAH-HELICAL COILED COILS.

PTM: TWO CYSTEINE RESIDUES IN THE S1 DOMAIN ARE SELECTIVELY ALKYLATED AND ARE REQUIRED FOR MYOSIN ATPASE ACTIVITY.

MISCELLANBOUS: EACH MYOSIN HEAVY CHAIN CAN BE SPLIT INTO 1 LIGHT MEROMYOSIN (LMM) AND 1 HEAVY MEROMYOSIN (HMM). IT CAN LATER BE SPLIT FURTHER INTO 2 GLOBULAR SUBFRAGMENTS (S1) AND 1 ROD-SHAPED STREEPLAMENT (C2)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                nitted (AUG-1996) to the EMBL/GenBank/DDBJ databases. FUNCTION: MUSCLE CONTRACTION.
SUBUNIT: MUSCLE MYOSIN IS A HEXAMERIC PROTEIN THAT CONSISTS HEAVY CHAIN SUBUNITS (MHC), 2 ALKALI LIGHT CHAIN SUBUNITS (MHC), 2 ALKALI LIGHT CHAIN SUBUNITS (MLC-2).
SUBCELLULAR LOCATION: Thick filaments of the myofibrils.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MISCELLANEOUS: MHC A AND MHC B ARE FOUND EXCLUSIVELY IN WALL MUSCLE. THEY CO-ASSEMBLE INTO BODY WALL THICK FILAW SIMILARITY: Contains 1 myosin-like globular head domain. SIMILARITY: Contains 1 IQ domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MISCELLANEOUS: THERE C.ELEGANS.

Heberle-Bors E., Hirt H.;
"The MsK family of alfalfa protein kinase genes encodes homologue shaggy/glycogen synthase kinase-3 and shows differential expressipatterns in plant organs and development.";
plant J. 3:847-856(1993).
-!- TISSUE SPECIFICITY: ABSENT IN LEAVES AND PETIOLES WHILE A MOI EXPRESSION IS SEEN IN THE STEMS, ROOTS, AND NODES.
-!- SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES. CDC2/CDKX SUBFAMILY; GSK-3 SUBSUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE-94004996; PubMed=8401615;

Natl. Acad. Sci. U.S.A. 92:3809-3813(1995).
-I- FUNCTION: NOT KNOWN; SUPPRESSOR OF SULFOXIDE ETHIONINE
-I- SUBCELLULAR LOCATION: Integral membrane protein.
-I- SIMILARITY: Belongs to the allantoate permease family.

Biol. 8:2675-2680(1988).
FUNCTION: Probably plays a rote in facilitating the assembly multimeric protein complexes inside the ER (By similarity).
SUBCELLULAR LOCATION: Endoplasmic reticulum lumen.
SIMILARITY: BELONGS TO THE HEAT SHOCK PROTEIN 70 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    HUMAN
